Sharing personally meaningful moments on social media can sometimes feel high-stakes.

This hesitation to share is particularly an issue for teens who often use social media to fulfill their relational needs.

This hesitation to share is particularly an issue for teens who often use social media to fulfill their relational needs.

- **Social media is central to teens' lives.**

This hesitation to share is particularly an issue for teens who often use social media to fulfill their relational needs.

- Social media is central to teens' lives.
- Relationship building and identity development (which often happens through peer validation) are key parts of their growth.

This hesitation to share is particularly an issue for teens who often use social media to fulfill their relational needs.

- Social media is central to teens' lives.
- Relationship building and identity development (which often happens through peer validation) are key parts of their growth .
- **They seek social connections on social media but often feel disappointed.**

A major source of disappointment is the lack of support for their privacy concerns.

A major source of disappointment is the lack of support for their privacy concerns.

- **Relationship building starts with authentic self-disclosure.**

A major source of disappointment is the lack of support for their privacy concerns.

- Relationship building starts with authentic self-disclosure.
- **Contrary to common misconceptions, research has shown teens are very aware of the online privacy risks of self-disclosure.**

- *28% of public Instagram owners reported “Dysfunctional Fear” around privacy risks (Kim, 2025):*
 - worry that decreases the quality of life without leading to constructive actions
- Disempowerment that comes from such fear leads to:
 - Withdrawal, self-censoring
 - **Privacy resignation, “network defeatism”, oversharing**

**Privacy in social media, especially for teens,
is not solely about restricting access to
personal information.**

**Privacy in social media, especially for teens,
is not solely about restricting access to
personal information.**

**It is an ongoing process of interpersonal
boundary regulation.**

Social media privacy narratives and platform designs often frame privacy as a trade-off between disclosure and control. However,

Social media privacy narratives and platform designs often frame privacy as a trade-off between disclosure and control. However,

- **Privacy-as-control is ineffective a networked environment where information is co-owned:**

Social media privacy narratives and platform designs often frame privacy as a trade-off between disclosure and control. However,

- Privacy-as-control is ineffective a networked environment where information is co-owned:
 - **Puts the entire burden of privacy protection on individuals**

Social media privacy narratives and platform designs often frame privacy as a trade-off between disclosure and control. However,

- Privacy-as-control is ineffective a networked environment where information is co-owned:
 - Puts the entire burden of privacy protection on individuals
 - **Implies sharing == giving up rights to privacy**

Social media privacy narratives and platform designs often frame privacy as a trade-off between disclosure and control. However,

- Privacy-as-control is ineffective a networked environment where information is co-owned:
 - Puts the entire burden of privacy protection on individuals
 - Implies sharing == giving up rights to privacy
 - **Hence encourages withdrawal from sharing**
→ **users miss opportunities to connect**

Our research focused on understanding how teens currently navigate self-disclosure, and how platform design may support or undermine the types of disclosure they find meaningful for social connection.

We conducted a three-part study with 19 teens aged 13-18, involving two interviews and a 7-day diary study.

We conducted a three-part study with 19 teens aged 13-18, involving two interviews and a 7-day diary study.

Entry Interview

- 30 minutes
- General inquires about social media sharing

- Designs that hinder or support sharing

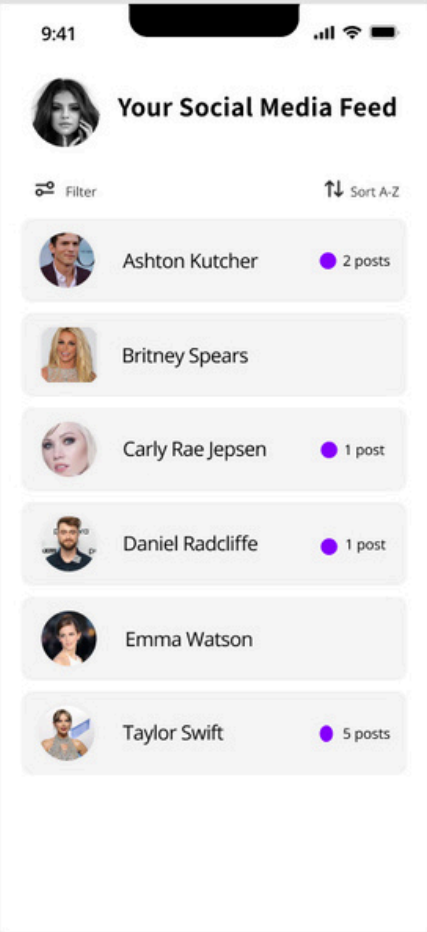

(a) Guided Disclosure

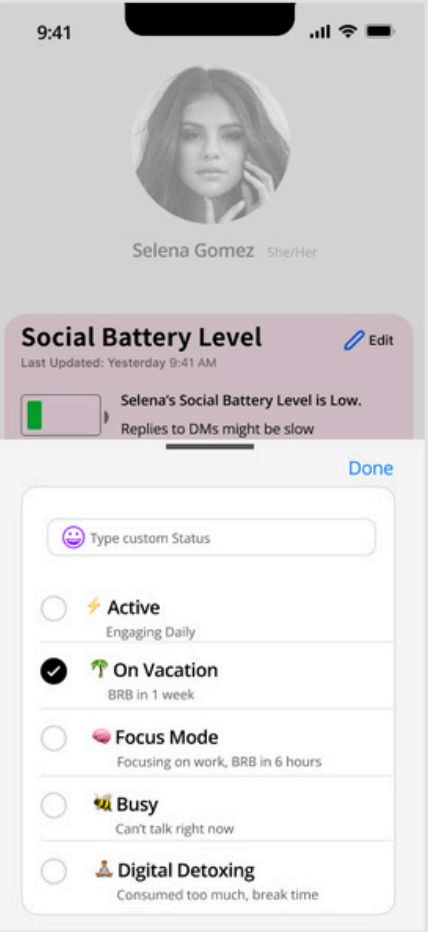

(b) Low-Stakes Disclosure

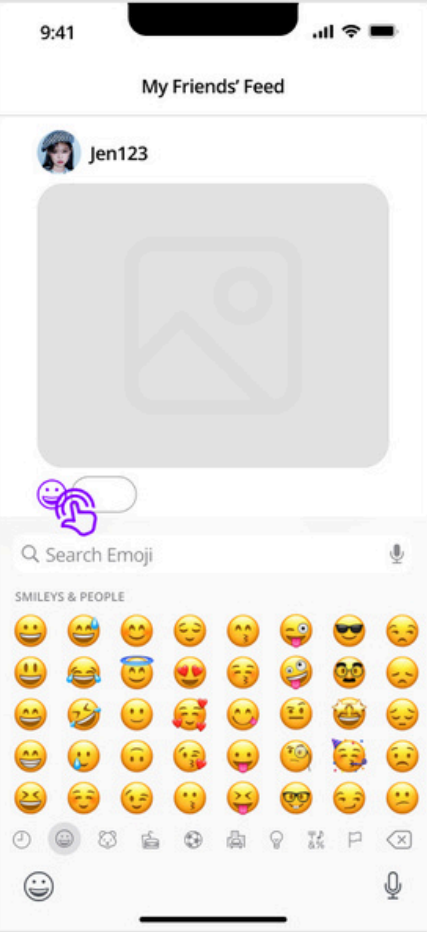

(c) Contextual Disclosure

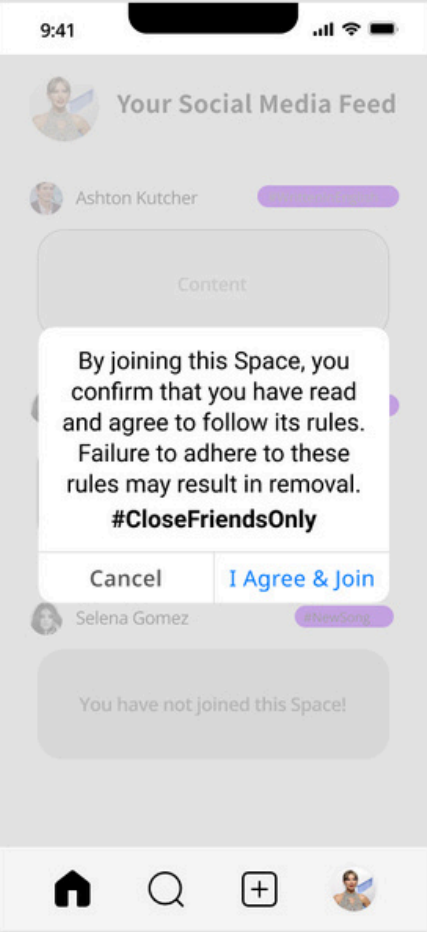

(d) Self-Contained Disclosure

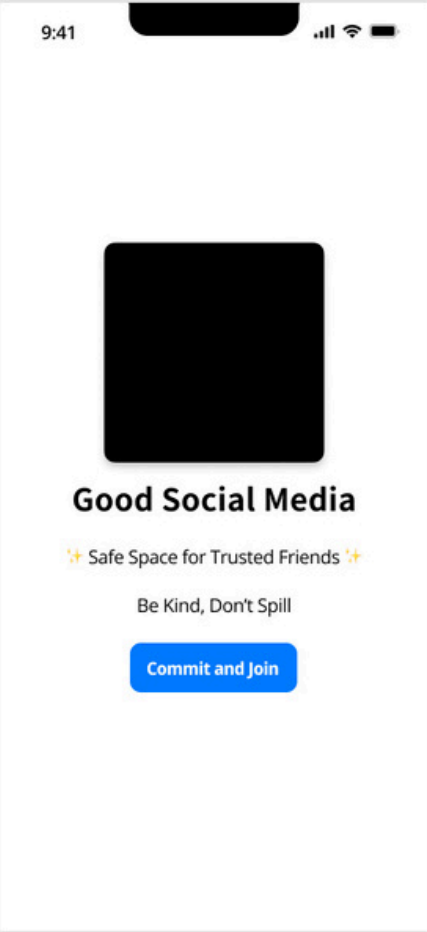

(e) Contextual Clarity

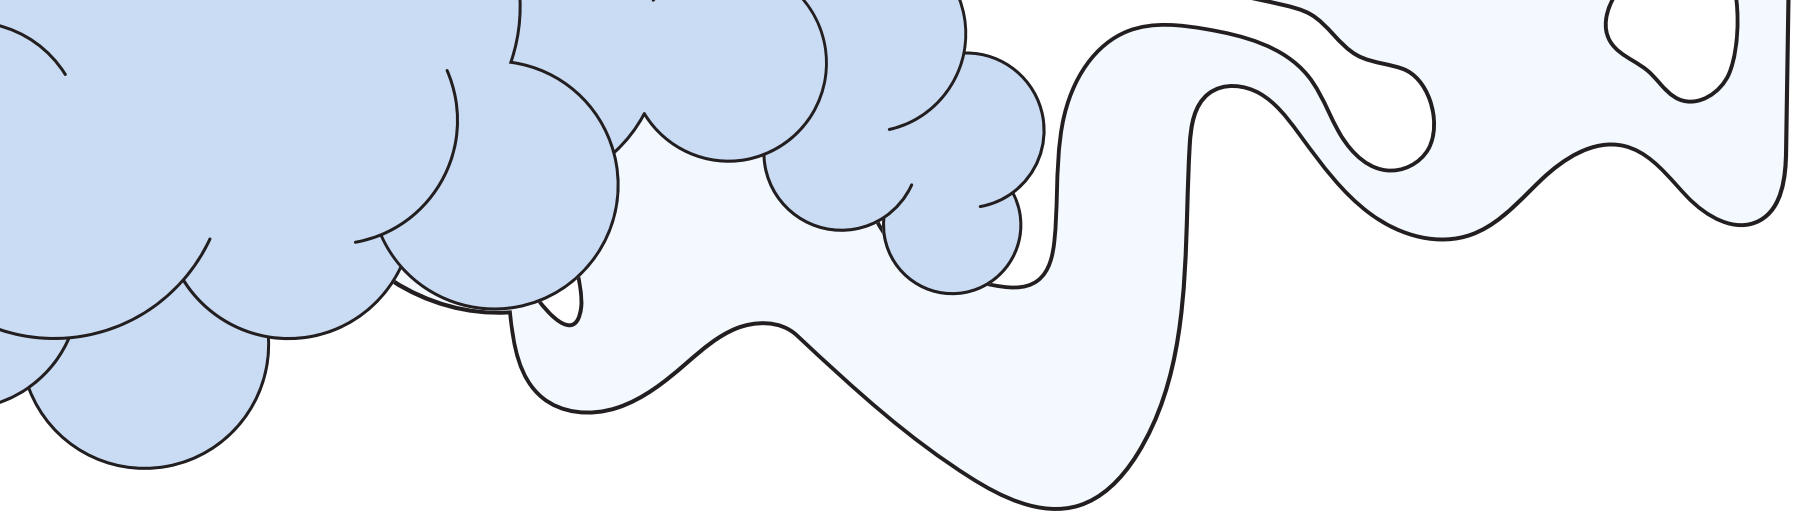

(f) Intentional Signaling

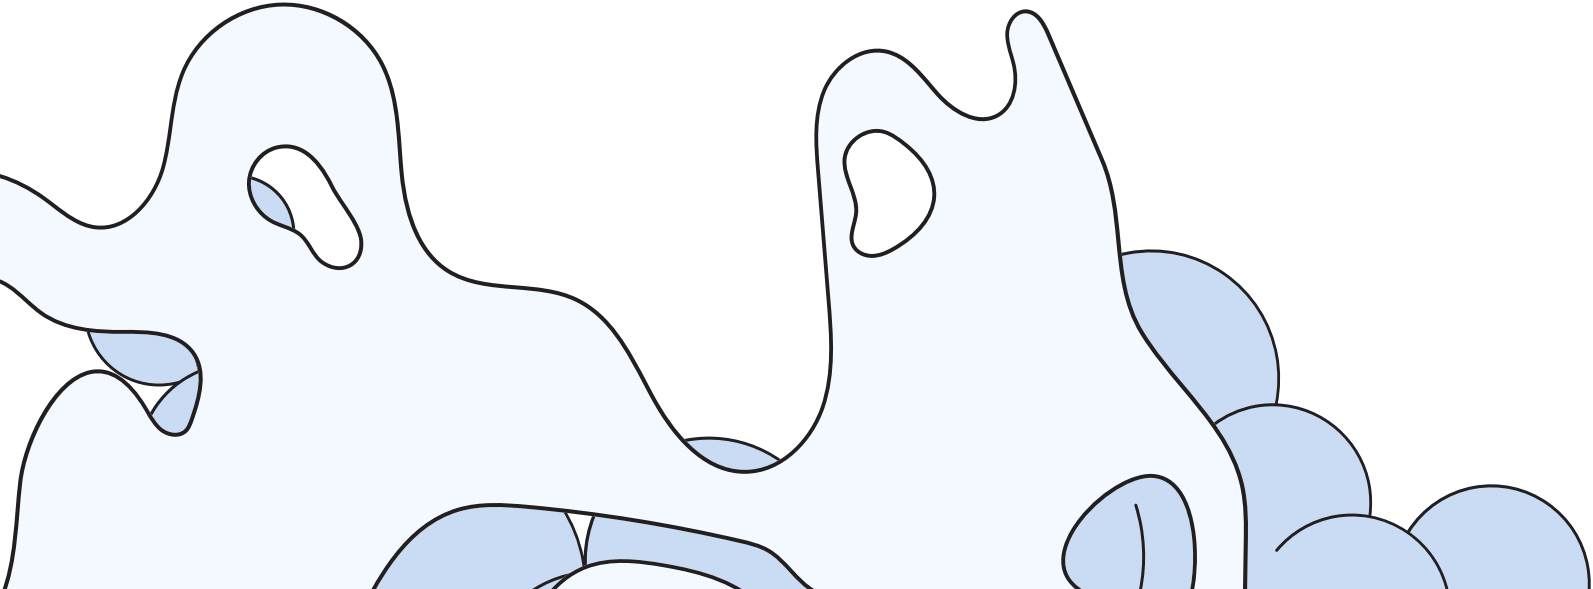

(g) Mutual Commitment

(h) Trust-Centered Norms

RQ1: How do teens navigate self-disclosure within social media environments, and what factors influence their decisions to share?

1. Teens wish to share small, personal moments that could lead to meaningful connections.

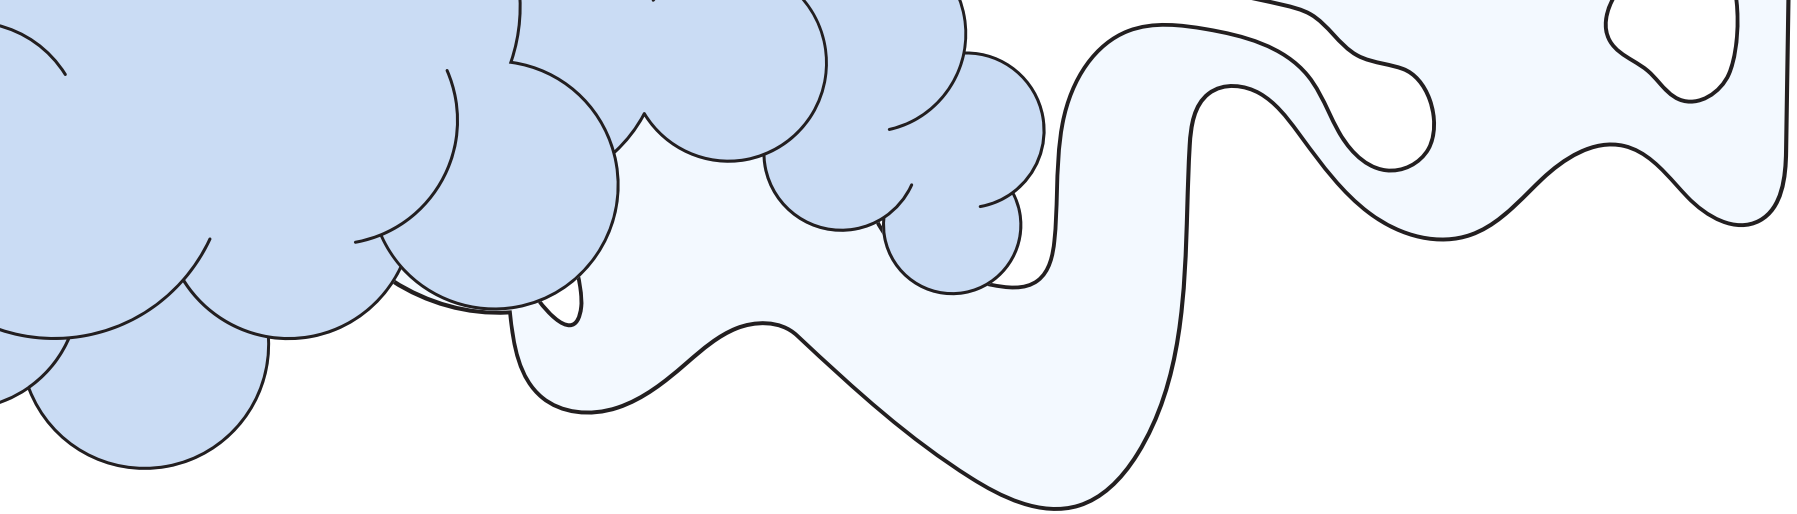

1. Teens wish to share small, personal moments that could lead to meaningful connections.

“(I want to be able to share) Just some of the more mundane details of my personal life you know, like ... yesterday I was really happy because I made some microwave popcorn and at the end there were only 11 unpopped kernels at the bottom of the bag. Just little things like that.” (P_e19)

2. Teens saw that trust and self-disclosure are deeply intertwined, bidirectionally.

2. Teens saw that trust and self-disclosure are deeply intertwined, bidirectionally.

“For me, building trust looks like getting to post what you like, and maybe having a small two-minute conversation [about it] ...
[Trust is a] mutual thing --- if you reply more to me and I will talk to you more. That builds trust because we get to know each other more.” (P_c13)

RQ2: How does social media design support or undermine trust-based self-disclosure among teens?

Our study introduces two major barriers to trust-building, meaningful self-disclosure among teens:

Our study introduces two major **barriers** to trust-building, meaningful self-disclosure among teens:

Communication Fog

ambiguous norms and audience

Our study introduces two major **barriers** to trust-building, meaningful self-disclosure among teens:

Communication Fog

ambiguous norms and audience

Low-Grace Culture

high-stakes environment with (perceived and actual) distrust and hostility

Examples of Communication Fog

① Ambiguous Norms create uncertainty about what and how much to share.

① **Ambiguous Norms** create uncertainty about what and how much to share.

- Teens make sense of ambiguous norms by observing other users' behaviors
- Often use peers as reference points

① **Ambiguous Norms** create uncertainty about what and how much to share.

- Teens make sense of ambiguous norms by observing other users' behaviors
- Often use peers as reference points

“Oftentimes, I kind of match what my friends post.” (P_e02)

① **Ambiguous Norms** create uncertainty about what and how much to share.

- Teens make sense of ambiguous norms by observing other users' behaviors
- Often use peers as reference points

“Oftentimes, I kind of match what my friends post.” (P_e02)

“On Instagram, not famous people, in my experience, do not normally post random stuff like this, so it would be weird to make it my first post.” (P_d16)

Instagram requires users to make
“active choices” about sharing.

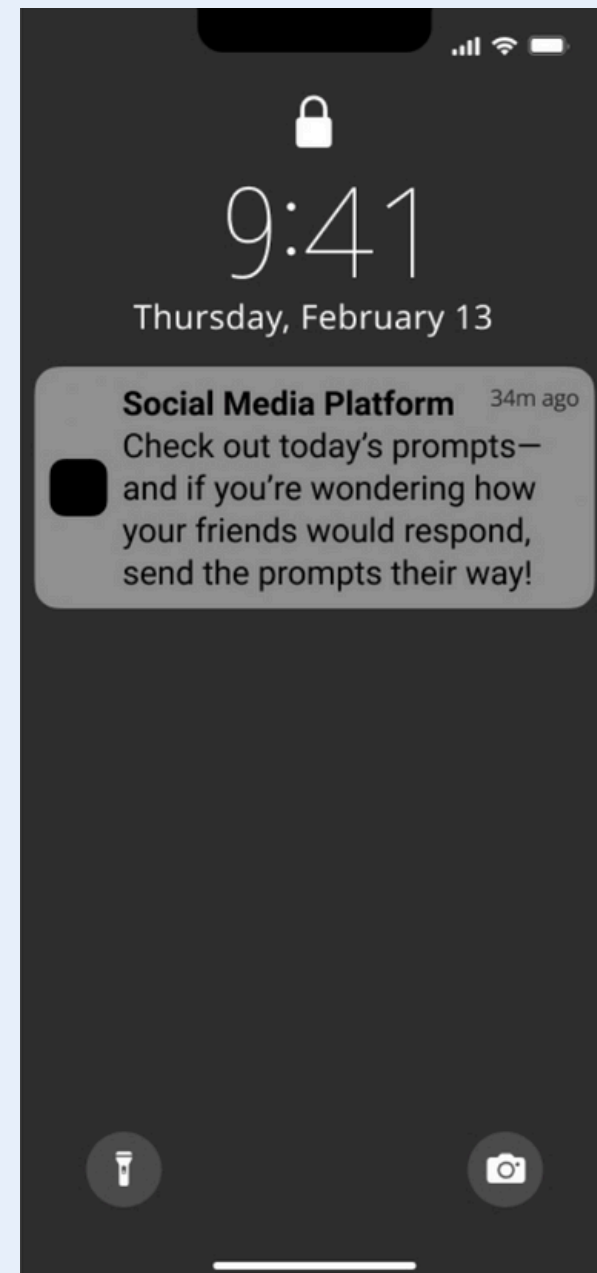

Instagram requires users to make
“active choices” about sharing.

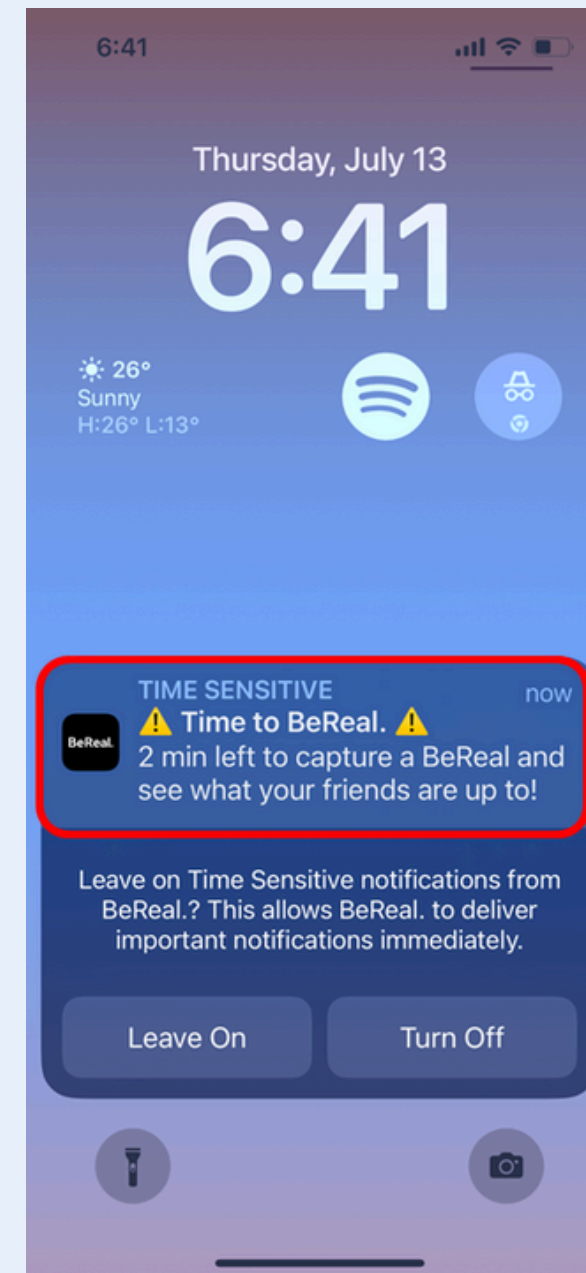

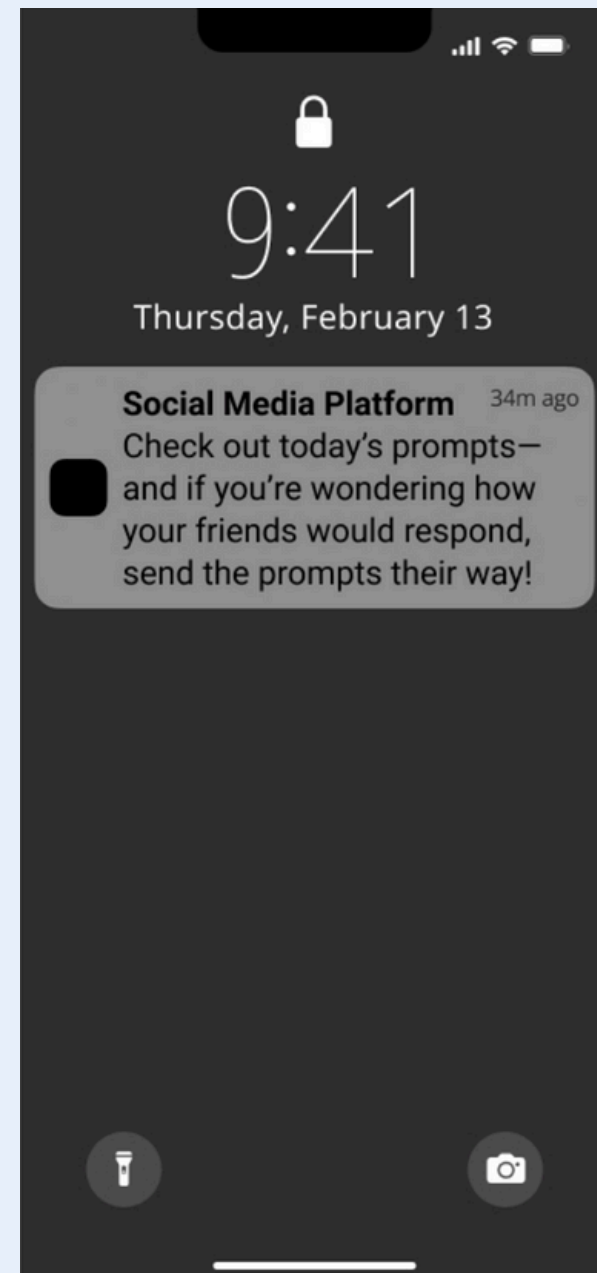

This burden can lead to fears of
backlash, for example, sharing being
interpreted as “attention-seeking”
rather than a bid for connection.

Teens desire **Guided Disclosure** with clear cues about socially appropriate sharing.

Teens desire **Guided Disclosure** with clear cues about socially appropriate sharing.

② **Ambiguous Loyalty** creates challenges in boundary regulation based on trust.

② **Ambiguous Loyalty** creates challenges in boundary regulation based on trust.

- Platforms push to add more friends (e.g., displaying the number of followers)
→ untrustworthy audience

② **Ambiguous Loyalty** creates challenges in boundary regulation based on trust.

- Platforms push to add more friends (e.g., displaying the number of followers)
→ untrustworthy audience

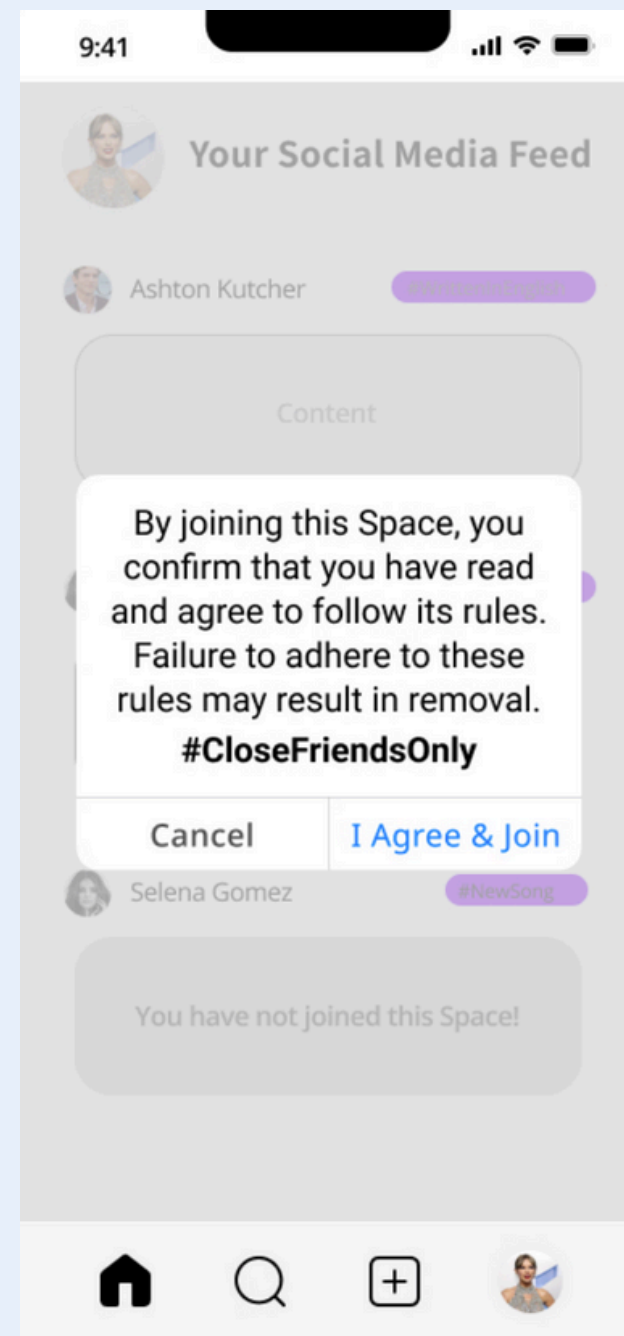

“You never can really know who’s viewing your content or who’s REALLY following you.” (P_c08)

Teens propose **Mutual Commitment** to content consumption to share accountability.

Teens propose **Mutual Commitment** to content consumption to share accountability.

“[On Snapchat’s Private Story] If they joined that story, [then] they’re kind of the ones subjecting themselves to it. If they didn’t want to see it, they’d never had to join it.” (P_e12)

Example of Low-Grace Culture

③ **Nonconsensual Exposure** makes teens fear burdening others and being judged by public standards.

③ **Nonconsensual Exposure** makes teens fear burdening others and being judged by public standards.

- Following someone == implicitly agreeing to see their content in your feed
- Sharing content == implicitly agreeing to appear in others' feeds

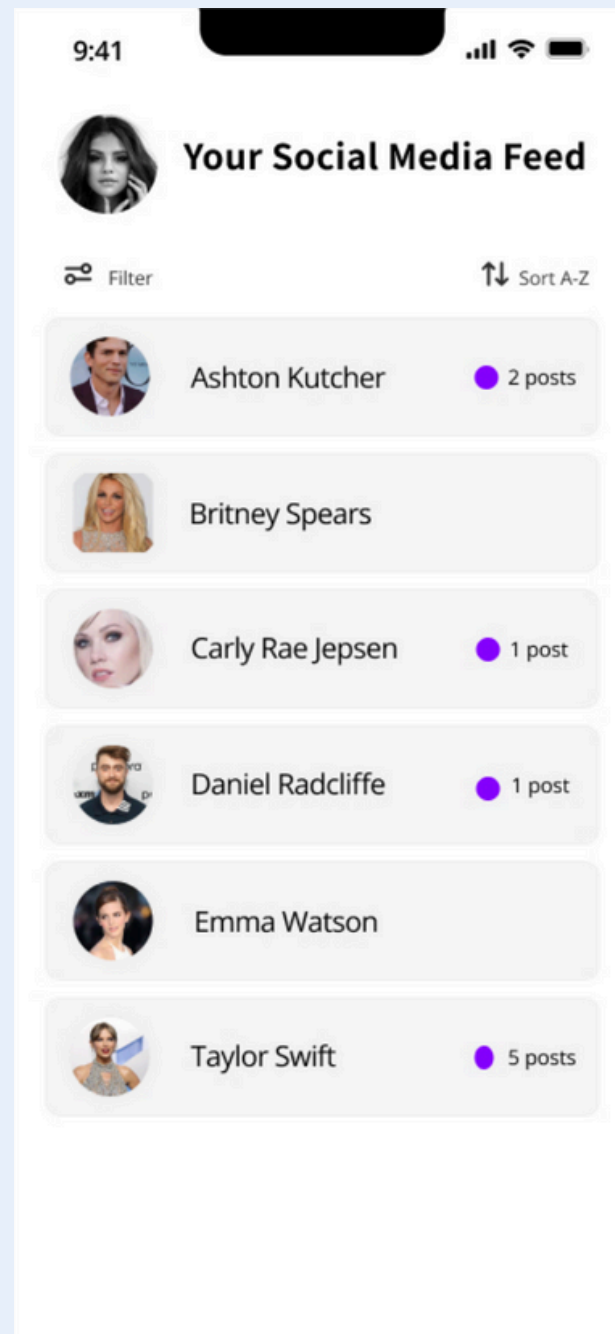

③ **Nonconsensual Exposure** makes teens fear burdening others and being judged by public standards.

- Following someone == implicitly agreeing to see their content in your feed
- Sharing content == implicitly agreeing to appear in others' feeds
- **Viewers feel "buried" in posts**
- **Sharers fear "spamming" or "clogging" feeds**

Teens believe **Self-Contained Disclosure** will reduce unnecessary friction in sharing.

- share without imposing on others

“Like little status updates”
(P_c05)

We Introduce “Trust-Enabled Privacy” as a framework that recognizes trust—whether building or eroding—as central to social media boundary regulation.

We Introduce “Trust-Enabled Privacy” as a framework that recognizes trust—whether building or eroding—as central to social media boundary regulation.

We Introduce **“Trust-Enabled Privacy”** as a framework that recognizes trust—whether building or eroding—as central to social media boundary regulation.

We Introduce “**Trust-Enabled Privacy**” as a framework that recognizes trust—whether building or eroding—as central to social media boundary regulation.

The framework also foregrounds the role of platform design in shaping platform norms, which influence trust, privacy, self-disclosure, and ultimately, opportunities for social connections.

To sum...

Teens **want to share** small, everyday moments to build trust and connection, but face **high emotional stakes** due to ambiguous social norms (i.e., “Communication Fog”) and environments that often feel judgmental or unforgiving (i.e., “Low-Grace Culture”).

We introduce 8 design ideas to **counter these barriers and build trust.**

Building on frameworks like *Privacy as Trust* (Waldman, 2018), we challenge the assumption that privacy and sharing are a trade-off.

Our approach calls for platform designs that intentionally cultivate trust, making privacy and sharing **mutually reinforcing** and **expanding the frontier of interactions that are safely possible** on these platforms.

Key Takeaways

1. Self-disclosure is crucial for teens, serving as the smallest token of trust and a foundation for relationship building.
2. Teens perceive **small, personal moments** as meaningful self-disclosure, yet current platforms do not support this type of sharing well.
3. We identify **two major barriers to such disclosure**—Communication Fog (ambiguous platform norms) and Low-Grace Culture (harsh social environments)—and **co-design** with teens ways to alleviate these barriers and foster trust.
4. We introduce the ***Trust-Enabled Privacy*** framework, which frames privacy as a dynamic, trust-building process rather than mere information control—an approach that is ineffective in networked environments. Critically, **platform design can either enable this trust-building or accelerate its erosion.**

**Positivity \neq Absence of
Negativity**

Trust-Enabled Privacy: Social Media Designs to Support Adolescent User Boundary Regulation
